PROFILE

Data architect and solution architect with 10 years of experience designing enterprise data platforms, modernising cloud workflows and leading technical delivery. At TCS, I have led large-scale ETL migration, built reusable data engineering patterns and shaped analytics layers across enterprise business domains. Experienced in AWS, Apache Airflow, Databricks, Redshift, Python, PySpark, SQL, data modelling, CI/CD and stakeholder-led architecture.

EXPERIENCE

TCS

Dec 2016 – Present

Solution Architect / Data Engineer · Enterprise client engagement through TCS · Singapore / India

- Architected an enterprise data platform spanning ingestion, warehousing and downstream analytics for multiple business domains.
- Led migration of **1,000+ Talend ETL jobs** to an AWS-based Apache Airflow framework, establishing reusable orchestration and transformation patterns.
- Designed Redshift and PostgreSQL warehouse models using dimensional modelling to support governed enterprise reporting.
- Built **10+ governed data marts** as a semantic layer, standardising business logic and KPI definitions for Tableau reporting.
- Improved pipeline reliability through Python/PySpark transformations, automated validation, source-to-target reconciliation and regression practices.
- Strengthened cloud access governance with role-based authentication and tuned EMR configurations to fit workload requirements.
- Established CI/CD and controlled database-promotion practices, including code review, repository governance and operational monitoring.
- Currently contributing to platform modernisation from Airflow toward Databricks-managed data engineering capabilities.
- Led technical delivery across a portfolio involving approximately **60 people** across multiple projects; coordinated shared architecture, engineering standards and competing priorities.

SELECTED DELIVERY WORK

Platform modernisation. Led migration of 1,000+ legacy ETL jobs to AWS and Airflow, then continued supporting the next phase of managed-platform evolution.

Commercial and healthcare analytics. Designed governed data marts, dimensional models and shared KPI definitions for enterprise reporting and analytics.

SELECTED DELIVERY / ARCHITECTURE / CAPABILITIES

Supply-chain delivery analytics. Developed data processing for expected-delivery calculations using operational calendars and transit-time dependencies.

Master data management. Maintained reference-data mappings and quality practices to support consistent integration and downstream analytics.

ARCHITECTURE & DELIVERY LEADERSHIP

- Set technical direction by translating stakeholder needs into implementable data-platform architecture and engineering standards.
- Mentored engineers, conducted code reviews and governed controlled database promotion through Flyway repositories.
- Coordinated technical delivery across multiple projects, balancing shared platform needs, project priorities and business requirements.
- Worked with Singapore stakeholders on solution design and delivery planning during onsite collaboration.

TECHNICAL CAPABILITIES

Cloud & platforms. AWS (Redshift, EMR, S3, Lambda, Glue, IAM, CloudWatch), Databricks, Apache Airflow, Talend, Control-M

Engineering. Python, PySpark, SQL, PL/SQL, T-SQL, shell scripting, ETL/ELT, metadata-driven pipelines, API integration

Data architecture. Enterprise data warehousing, dimensional modelling, star and snowflake schemas, semantic data marts, MDM, data quality, lineage

Governance & delivery. CI/CD, Flyway, Git, JIRA, automated testing, source-to-target reconciliation, Agile/Scrum, production monitoring

CERTIFICATIONS & ACCREDITATION

Databricks Certified Data Engineer Associate · Databricks Fundamentals Accreditation · Claude Certified Architect Professional · Claude Certified Developer Foundations · Claude Certified Associate Foundations

EDUCATION

Bachelor of Engineering, Computer Science & Engineering · S J B Institute of Technology, Visvesvaraya Technological University · 2012–2016
